

# PRODUCT INFORMATION SHEET

## **Machine Colorant**

Pacific Paint's machine colorants, suitable both for synthetic gloss enamels, and acrylic, PVA Emulsion paints, are specially formulated to have very high TINTING STRENGTH and extremely good LIGHT FASTNESS.

Available ten colorants, when added to different bases of various qualities in our product range in recommended proportions as mentioned in our tinting formulae, yield a wide spectrum of shades given in our colour chart.

Intermixable with each other, these colorants are highly stable and are easily cleanable with water. Not recommended for use in quantities more than 100ml per litre of paint. It is advisable to stir the colorants well before putting into the cannisters of Tinting machine as well in the cannisters regularly. Do not add any mineral Turps or water into the colourants, as they are supplied in ready for use form and their tinting strengths are meticulously adjusted. The various colorants are;

- **Ax** – Prema-Cal. Yellow
- **B** – Lamp Black
- **C** – Yellowoxide
- **D** – Pathalo Green
- **E** – Pathalo Blue
- **F** – Red oxide
- **R** – Exterior Red
- **V** – Magneta
- **I** – Brown Oxide
- **L** – Raw Umber

Pacific Paint's uses COLORTREND Colorants manufactured by HULS USA. Incorporating the best and latest in Colour Technology.
